

TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

# TA8759BN

## VIDEO CHROMA AND SYNC. SIGNAL PROCESSING IC FOR PAL / NTSC / SECAM SYSTEM COLOR TELEVISION

The TA8759BN is an PAL/NTSC/SECAM video /chroma / deflection sub system with the teletext interface circuit. The TA8759BN includes all of the functions required to realize a multi-color CTV in conjunction with a PIF/SIF IC, in a 64 leads shrink type dual-in-line plastic package.

### FUNCTIONS

- Realized a full automatic multi-color processing in conjunction with the TA8615N system switch, with minimal external components.
- Forced system selection.
- Automatic system change by a sub-carrier detection.
- The mode change output can be used for switching the external components or circuits.
- RGB interface with high switching speed, a half tone control and an independent contrast control.

### FEATURES

#### Video stage

- DC controlled 2'nd order differential picture sharpness.
- Contrast control with Uni-color control.
- Brightness control with pedestal clamp.
- Internal vertical blanking.

#### Chroma stage

- ACC circuit.
- Color control / Uni-color control.
- RGB primary color demodulator outputs.
- Adjustment free APC circuit.
- Tint control.
- PAL / NTSC / SECAM automatic system detection.
- Forced system selection / Automatic sub-carrier detection and switching.

SDIP64-P-750-1.78

Weight : 8.85g (Typ.)

961001EBA2

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
- The products described in this document are subject to foreign exchange and foreign trade control laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.

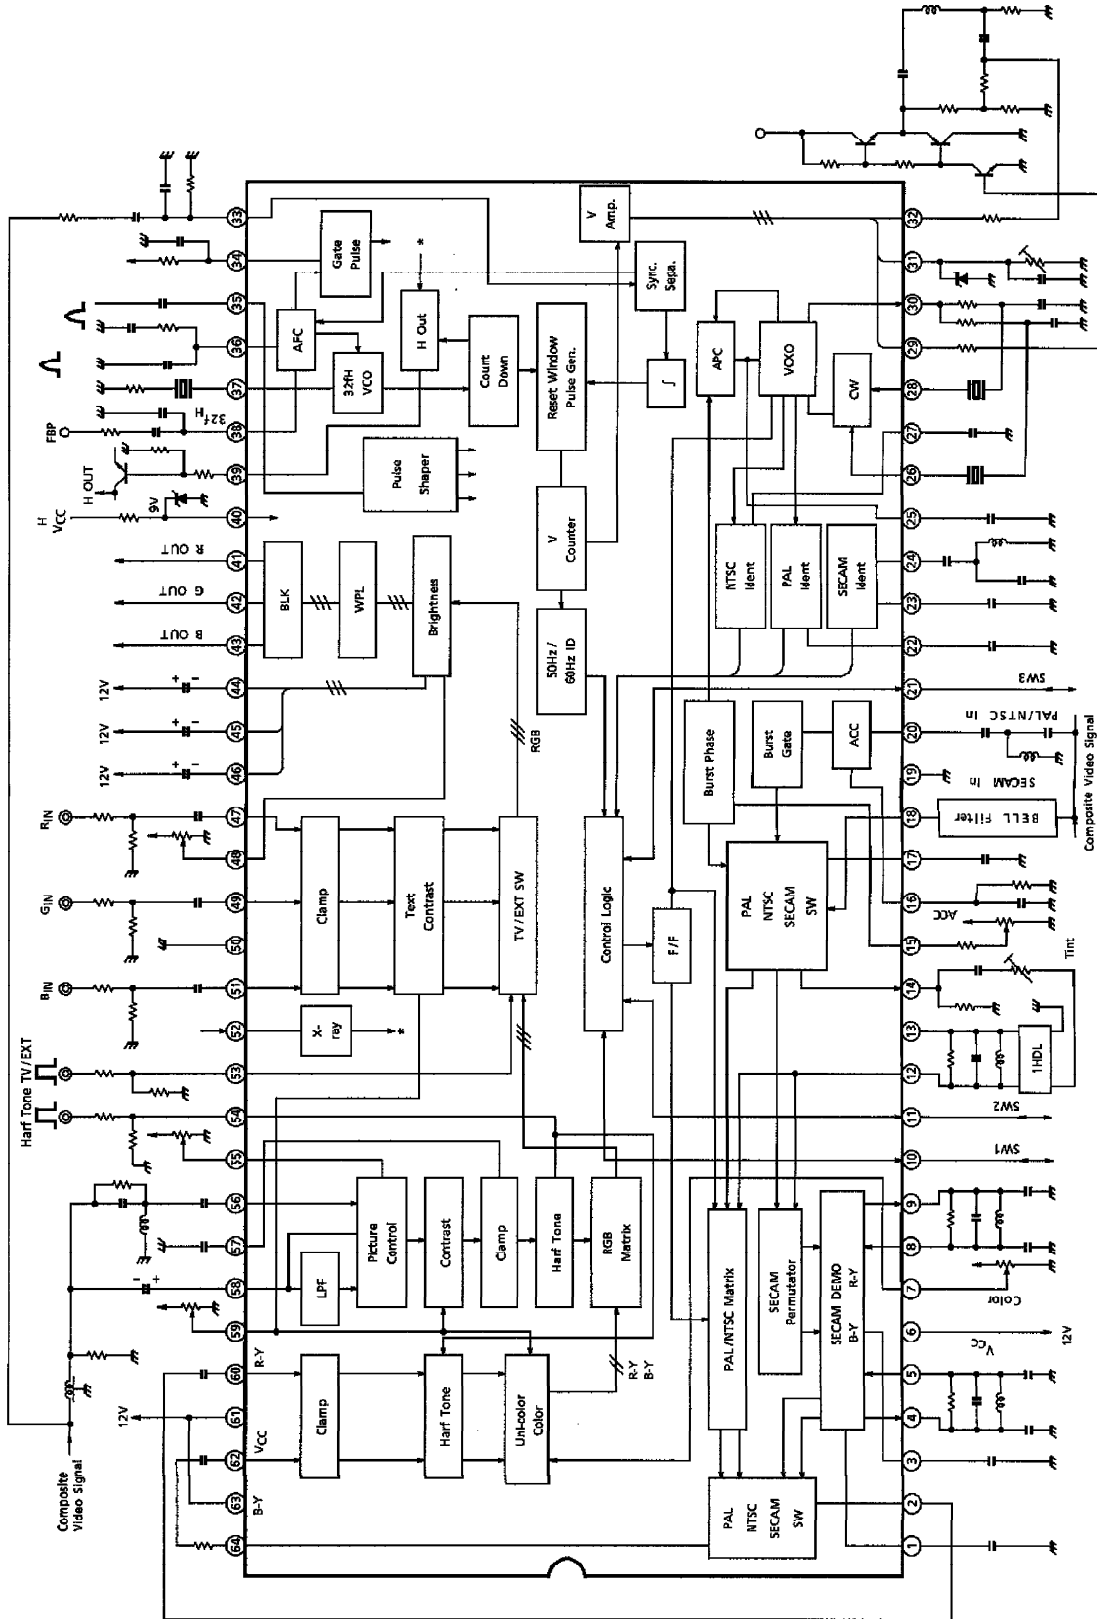

**Deflection stage**

- Excellent sync. separator performance.
- Adjustment free H/V oscillator by a count down system.
- Stable Vertical Sync.
- Saw tooth type horizontal AFC.
- Horizontal pre-driver.
- X-ray protector.
- Vertical NFB amplifier.
- 50Hz / 60Hz Automatic detection.

**Teletext interface stage**

- RGB inputs.
- TV / RGB switch.
- Text contrast control.
- Half tone control.

TERMINAL FUNCTION

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
1 3	SECAM De-emphasis	Connect a capacitor to GND for SECAM De-emphasis. Pin 1 : B-Y Pin 3 : R-Y	
2 64	Color Differential Signal Output	Pin 2 : R-Y Pin 64 : B-Y Load resistor of 8.2kΩ is connected to GND.	
4 9	SECAM Detector	A tuned tank circuit for SECAM detector is connected.	
5 8	SECAM Detector	A tuned tank circuit for SECAM detector is connected.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
6	V <sub>CC</sub>	The typical supply voltage is 12.0V. Bypass capacitance is connected to the pin 19.	
7	Color Control	Color saturation increases when the terminal voltage of pin 7 increases. When the color killer circuit operates, the terminal voltage of pin 7 turns to low.	
10 11 21	System Logic I/O	<p>This terminal is an output of System Identification Logic circuit and also an input of Manual Select Mode. Pin 10 : SW1 Pin 11 : SW2 Pin 21 : SW3 See logic table.</p> <p>NTSC Ident output are inhibited by allowing a current of 0.75mA (Typ.) or more to flow through pin 11.</p> <p>Color difference output signals are cut off when the pin 21 flow-in current is 0.75mA (Typ.).</p> <p>Set the high level of forced (manual) mode within a range of <math>6 \pm 0.5V</math>.</p>	

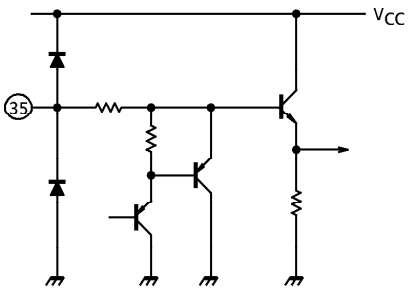

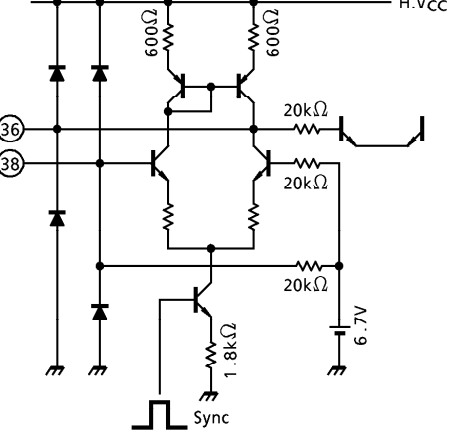

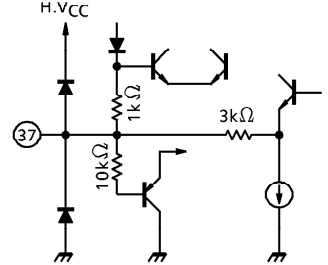

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
12	Delayed Chroma Signal Input	1H delayed chroma signal input for PAL/SECAM. The signal phase shift between pin 14 and pin 12 should be less than 5°. The signal loss of the 1H delay line should be 16dB.	
13	Bias	An external capacitor for a bias circuit is connected.	
14	Delay Line Driver Output	The PAL/SECAM chroma signal output for a 1H delay line. Connect a load Resistor of 2kΩ to GND.	
15	Tint Control (NTSC Mode)	A phase of burst signal is controlled by this terminal in the NTSC mode. On 312/313H TELETEXT application, the applied voltage of pin 15 sets less than DC 2.0V, and then the synchronization system is locked at 312/313H TELETEXT signal. For receiving normal TV or VCR signal, the applied voltage sets more than DC 2.0V. For PAL and SECAM, the pin 15 should be AC grounded.	
16	ACC Filter	An external capacitor for ACC filter is connected.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
17	Bypass Filter	An external bypass capacitor for a bias circuit is connected.	
18	SECAM Signal Input	SECAM chroma signal is led to this terminal through a Bell filter circuit. Terminal DC voltage is changed by the 50/60 identification logic output. 7.50V for 60Hz 4.45V for 50Hz This identification output is useful for changing a vertical size and shifting a horizontal position on the screen.	
19	GND	GND of the chroma stage.	
20	PAL/NTSC Chroma Signal Input	PAL/NTSC chroma signal is led to this terminal through Band pass filter circuit. The SECAM identification mode is determined by this terminal DC voltage. Open : Line Ident. 15kΩ to GND : Line + Frame Ident.	
22 23 27	Ident Filter	An external capacitor for Ident filter is connected. Pin 22 : PAL Ident Filter Pin 23 : SECAM Ident Filter Pin 27 : NTSC Ident Filter	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
24	SECAM Ident Discriminator	<p>A 4.328MHz tuned tank circuit for SECAM Identification is connected.</p> <p>Adjust tank coil so that the recovered DC voltage at pin 23 is maximum value for 4.328MHz.</p>	
25	APC Filter	<p>APC filter time constant is connected.</p> <p>When the killer operates, automatic searching circuits operate to widen the pull in range of the APC circuit. The external time constant also determines the searching speed.</p>	
26 28	X'tal In	<p>Pin 26 : 3.58MHz X'tal IN 3.58MHz X'tal is connected between the pin 26 and pin 30.</p> <p>Pin 28 : 4.43MHz X'tal IN 4.43MHz X'tal is connected between the pin 28 and pin 30.</p> <p>No adjustment is required.</p>	
29	Vertical Output	<p>Output terminal of vertical driver.</p>	

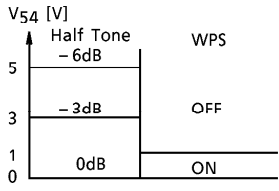

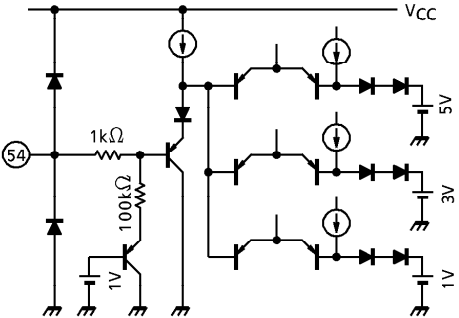

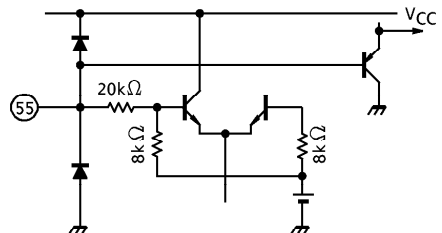

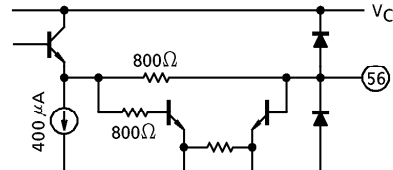

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
30	X'tal Drive	X'tal is connected between the pin 26, 28 and pin 30.	
31	Ramp Generator	A vertical saw tooth wave generator circuit is composed by a ramp capacitor, a zener diode which determines a saw tooth starting voltage, and a discharge resistor.	
32	Vertical NFB	AC and DC Negative Feed Back terminal. The wave form of pin 32 is equivalent to that of pin 31 according to internal operational Amplifier.	
33	Sync. Sep. Input	Input terminal of emitter-time constant type sync. separator. Sync. Sep. level is ; $V_{th} \approx \frac{(6 + V_i) R_1 T_r}{R_1 T_r + R_2 T_s}$	
34	Gate Pulse Filter	An external filter for a gate pulse is connected.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
35	Flyback Pulse Input/Sync. Pulse Output	<p>Flyback Pulse is used as a Horizontal Blanking of color differential signal output (pin 2, 64), color primary signal output (pin 41, 42, 43) and 1H delay line output (pin 14), and also used as a masking pulse for a gate pulse generator, PAL matrix switching, and a SECAM permutator switching. This terminal is also the output of sync. signal. During Sync. period, the terminal voltage of pin 35 turns to high.</p>	
36	AFC Filter	<p>An external capacitor and resistor for AFC filter are connected.</p>	
38	Integrated Flyback Pulse Input	<p>A saw tooth type horizontal AFC circuit is composed. Pin 38 is an input terminal of integrated flyback pulse (saw-tooth). Pin 36 is an AFC filter terminal for <math>32f_H</math> VCO. Time constants for integration of flyback pulse should be switched so that a screen position is equivalent for 15.734kHz and 15.625kHz of horizontal frequency.</p>	
37	$32f_H$ VCO	<p>Adjustment free <math>32f_H</math> Voltage Controlled Oscillator. A ceramic resonator is connected. A wide Pull-in range covers both 15.625kHz and 15.734kHz of horizontal frequency.</p>	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
39	Horizontal Driver Output	An emitter follower output of horizontal pre-driver. An external load resistor is required.	
40	H.VCC	Supply terminal for a horizontal deflection circuit. Recommended supply voltage is 9.0V. A Bypass capacitance is connected to the pin 50.	
41 42 43	Color Primary Signal Output	Pin 41 : R out Pin 42 : G out Pin 43 : B out	
44 45 46	Clamp Capacitor	Clamp Capacitor for DC restoration is connected. Pin 44 R Pin 45 G Pin 46 B	
47 49 51	External RGB Signal Inputs	An input decoupling capacitor is used as a clamp capacitor. Input signal level is 0.7V <sub>p-p</sub> . Pin 47 R input Pin 49 G input Pin 51 B input	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT															
48	Brightness Control	Pedestal level of RGB output signals increases when the terminal voltage increases.																
50	GND	GND for Video circuit and Deflection circuit.																
52	X-ray	The input terminal of the X-ray protector. Pin 39 Hor. drive terminal turns to low when the input voltage of this terminal exceeds the specified threshold voltage. (1.3V typ.)																
53	TV/EXT Switching Signal Input	Fast Blanking pulse is acceptable. The threshold level is shown below. <table border="1" data-bbox="641 1123 852 1312" style="margin-left: auto; margin-right: auto;"> <tr> <td style="text-align: center;">V<sub>53</sub> [V]</td> <td style="text-align: center;">RGB</td> <td style="text-align: center;">BLK</td> </tr> <tr> <td style="text-align: center;">6</td> <td style="text-align: center;">TV</td> <td style="text-align: center;">Inhibit</td> </tr> <tr> <td style="text-align: center;">4</td> <td style="text-align: center;">RGB</td> <td style="text-align: center;">BLK</td> </tr> <tr> <td style="text-align: center;">0.7</td> <td style="text-align: center;">TV</td> <td style="text-align: center;">Enable</td> </tr> <tr> <td style="text-align: center;">0</td> <td></td> <td></td> </tr> </table>	V <sub>53</sub> [V]	RGB	BLK	6	TV	Inhibit	4	RGB	BLK	0.7	TV	Enable	0			
V <sub>53</sub> [V]	RGB	BLK																
6	TV	Inhibit																
4	RGB	BLK																
0.7	TV	Enable																
0																		

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
54	Half Tone / Full Tone Switching Signal Input	<p>When a half tone circuit is active, the TV video signal amplitude becomes smaller than nominal level.                      WPS (white peak suppress) Switch                      This terminal also switches the white peak suppress circuits.                      When this circuit is active, in case the RGB output voltage becomes higher than 7.5V, the contrast control terminal voltage is lowered by internal open collector circuit.                      Time constant is determined by external capacitance and variable resistor value at pin 59.</p> 	
55	Picture Sharpness Control / Mute Switch	<p>When pin 55 voltage becomes lower than 0.7V, Mute function operates. The brightness control circuit becomes the same condition that 3V is applied at pin 48, TV / EXT switch turns to TV mode, and the video signal and the color differential signal are cut.</p>	
56	Second Order Differential Video Signal Input	<p>Second order differential video signal component is applied to this terminal.</p>	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
57	Clamp	A terminal for a pedestal clamp capacitor.	
58	Video Input	A video signal of sync. negative going should be applied.	
59	TV Contrast Control With Uni-color Control Text Contrast Control	Video gain and color gain are controlled simultaneously. The typical gain control range is -20dB. Contrast control terminal for external RGB signal. The typical gain control range is -12dB.	
60 62	Color Differential Signal Input	The decoupling capacitor is used as a clamp capacitor. Pin 60 : R-Y input Pin 62 : B-Y input	
61	VCC	VCC for Video and Vertical Deflection stage. (12V) Bypass Capacitor is connected to pin 50.	
63	VCC	VCC for RGB output stage. (12V) Bypass Capacitor is connected to pin 50.	-

Deflection stage

NOTE No.	ITEM	SYMBOL	TEST METHOD
83	Sync. Separation Input Current Sensitivity	$I_{IN33}$	 <p>Adjust an external DC voltage (V). Read the current (A) when the terminal voltage of pin 35 changes from Low to High.</p>
84	H. AFC Phase Detection Current	$I_{DET}$	 <p>Connect pin 38 to GND through 30kΩ. Adjust an external DC voltage (V) so that no current flows. Measure the current with connecting pin 33 to GND through 20kΩ.</p>
85	Phase Detection Masked Period	$T_{CO60}$ $T_{CO50}$	 <p>Apply Composite video signal to pin 33 through sync. sep. filter. Monitor pin 36 waveform and measure the V-mask period.  <math>T_{CO60} \dots (60\text{Hz})</math>    <math>T_{CO50} \dots (50\text{Hz})</math></p>
86	32f <sub>H</sub> VCO Oscillation Stage Voltage	$V_{ON37}$	 <p>Apply an external DC voltage (V) to pin 40. Monitor pin 37 waveform through 0.01μF capacitor. Increase the DC voltage (V) from 0 to 9V. Measure the DC voltage of pin 40 when the oscillation signal of pin 37 appears. <math>V_{CC}</math> (12V) is not applied. (Note) Use a high-impedance probe.</p>
87	Horizontal Output Start Voltage	$V_{ON39}$	 <p>Same as note (86). Measure the DC voltage of pin 40 when the H.Pulse appears.</p>
88	Horizontal Free Running Frequency	$f_0$	Measure the frequency at pin 39.

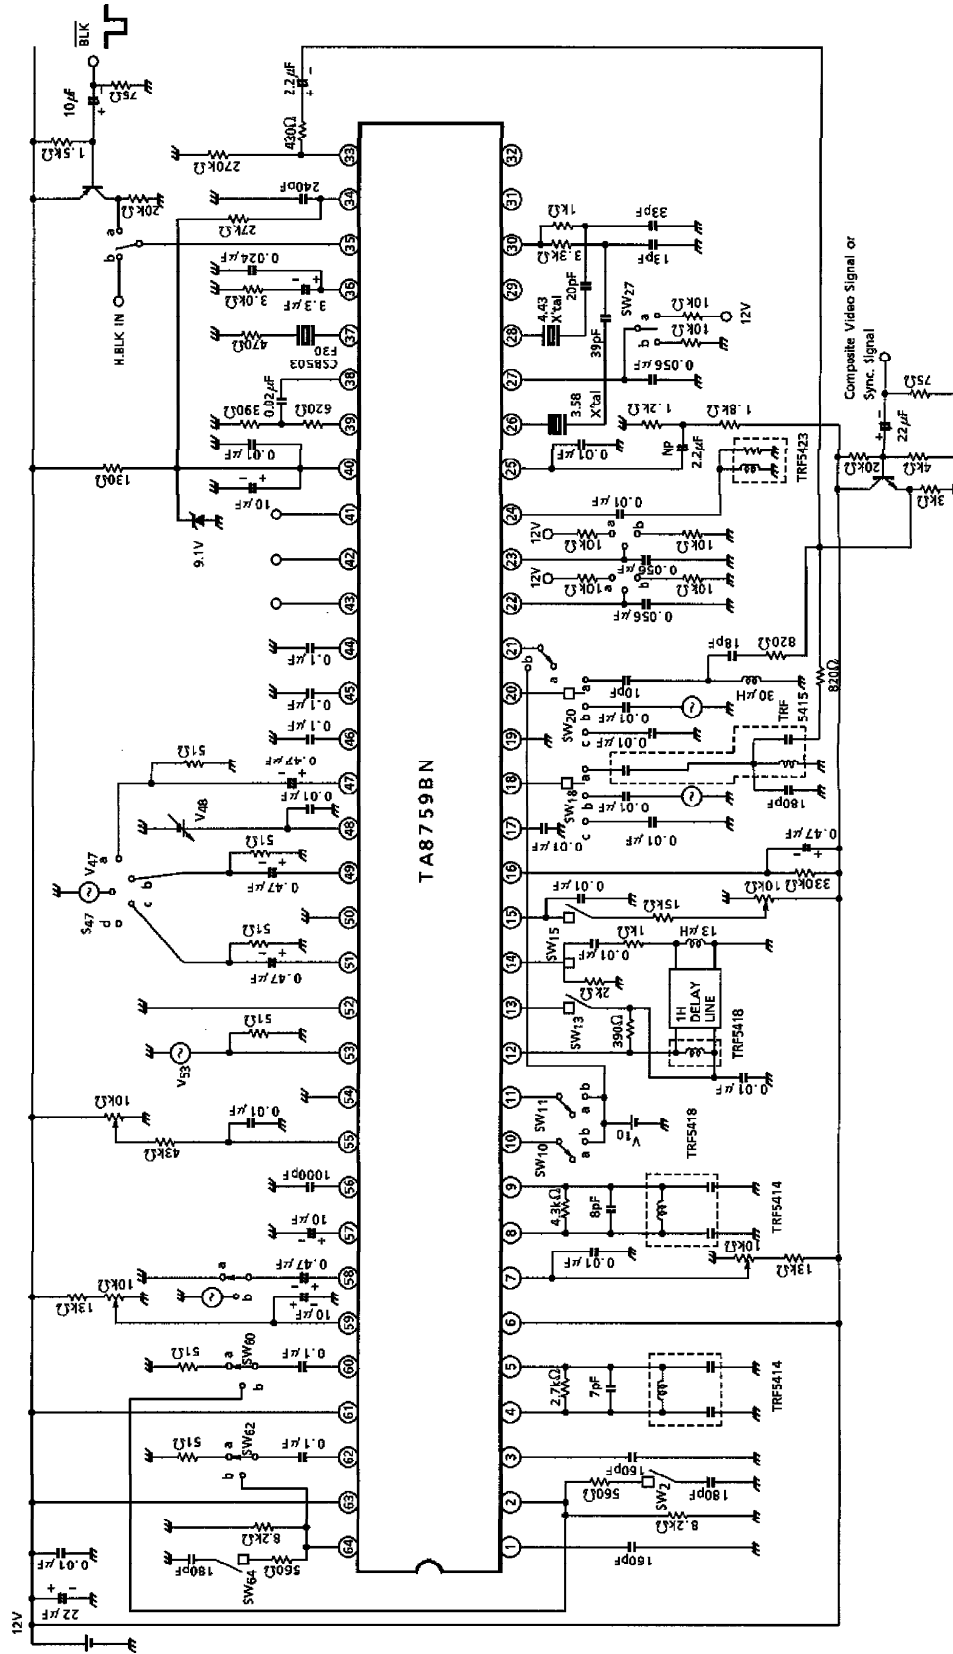

NOTE No.	ITEM	SYMBOL	TEST METHOD
89	Horizontal Frequency Oscillation Range	f <sub>MAX.</sub>	Connect pin 36 to GND through 30kΩ. Measure the frequency at pin 39.
		f <sub>MIN.</sub>	Connect pin 36 to H.V <sub>CC</sub> through 10kΩ. Measure the frequency at pin 39.
90	Horizontal Frequency Control Sensitivity	β <sub>H</sub>	<p>Measure the open terminal voltage at pin 36 (V<sub>36</sub>). Apply an external DC voltage of V<sub>36</sub> ± 0.1V and measure pin 39 frequency variation.</p> 
91	Horizontal Output Duty Ratio	T <sub>039</sub>	<p>Measure t<sub>1</sub> and t<sub>2</sub> by monitoring pin 39 waveform with a synchroscope.</p>  $T_{039} = \frac{t_1}{t_1 + t_2} \times 100 (\%)$
92	X-ray Protection Threshold Voltage	V <sub>I52</sub>	Apply an external DC voltage (V) to pin 52. Increase the DC voltage. Measure the DC voltage of pin 52 when the output pulse of pin 39 disappears.
93	X-ray Protection Hold Voltage	V <sub>H52</sub>	H.V <sub>CC</sub> = 9V. Apply an external DC voltage (V) to pin 52 so that H.Pulse at pin 39 disappears. Then set H.V <sub>CC</sub> = 2.5V. Check the H.Pulse at pin 39 still disappears when H.V <sub>CC</sub> is set 9V again.
94	X-ray Protector Current Sensitivity	I <sub>i52</sub>	Apply an external DC voltage (V) to pin 52. Increase the DC voltage. Measure the current when pin 39 is Low.
95	Horizontal Output Voltage	V <sub>H39</sub>	Measure the high level of pin 39 waveform (V <sub>H39</sub> ).
		V <sub>L39</sub>	Measure the low level of pin 39 waveform (V <sub>L39</sub> ).
96	Vertical Output Pulse Width	T <sub>031</sub>	<p>Measure the high state period of pin 31 waveform.</p> 

NOTE No.	ITEM	SYMBOL	TEST METHOD
97	Vertical Amplifier Gain	$G_V$	 <p>Apply an external DC voltage (V) to pin 32. Vary the external DC voltage from 7.4V to 7.6V. Measure the voltage change at pin 29.</p>
98	Vertical Output Dynamic Range	$V_{H29}$	Test condition is same as note (97). Measure the DC voltage at pin 29 when the external DC voltage of pin 32 is set to 6.5V.
		$V_{L29}$	Test condition is same as note (97). Measure the DC voltage at pin 29 when the external DC voltage of pin 32 is set to 8.5V.
99	Max. Output Current Of Vertical Ramp Generator	$I_{MAX31}$	 <p>Monitor the waveform of pin 31. Measure the current of ramp period.</p>
100	Pull In Range Of Vertical Oscillator	$V_{pull}$	Vary the vertical sync. period of the input composite signal. Test condition is same as note (85). Measure the vertical period when the vertical output pulse at pin 31 synchronizes to the input V sync. period.
101	60Hz Detector Ident Range	$V_{pull\ 60}$	Test condition is same as note (100). Measure vertical period when the DC voltage at pin 18 is approximately 7.3V.
102	Vertical Blanking Pulse Width	$T_{B60}$	Measure the vertical blanking width at RGB outputs. Vertical frequency of input signal is 60Hz.
		$T_{B50}$	Measure the vertical blanking width at RGB outputs. Vertical frequency of input signal is 50Hz.
103	Phase Of Gate Pulse NTSC/PAL	$T_{PN\ I}$	  <p>Measure the <math>T_{PN\ I}</math> and <math>T_{PN\ II}</math> at pin 27 with a synchroscope.</p>
		$T_{PN\ II}$	
104	Phase Of Gate Pulse SECAM	$T_{S\ I}$	 <p>Measure the <math>T_{S\ I}</math> and <math>T_{S\ II}</math> at pin 23 with a synchroscope.</p>
		$T_{S\ II}$
